

Project: Sprint 2

Effective date 5/16/13

For Sprint 2, each team is given the opportunity to discuss their progress on the term project thus far in an informal presentation to the class.

1. Content:

Recapping Sprint 1, your presentation should begin with a layout or mockup of the final product, and a brief discussion about how it addresses the project theme. Please highlight your thematic approach, and how the chosen sections flow from the overall theme and purpose.

Next, the presentation should turn to the actual implementation of the model in terms of the HTML choices and details. Your report should show how the content has taken shape and stabilized.

2. Presentation:

The manner in which the various sections of the content are styled should be described in fairly detailed terms. Implementation details are not necessary, but include a description of the approach for major portions of the content. Illustrate how the visual design choices support a thematically cohesive presentation.

3. Behavior:

Briefly describe the intended behavior and user interaction model of the web site. Event driven behavior should be listed together with the purpose of each interaction.

4. Project management:

Please mention the methods and/or tools used for managing your project. Make it clear how work is archived (i.e., version control) and progress is tracked.

Beginning with this presentation, your classmates will evaluate specific points of the report. This peer evaluation will be considered in the grading of the presentation, constituting 20% of the grade. The feedback from your classmates, and comparing your presentation to others, should help you greatly in "filling in the gaps" as you make further progress.
